Target Audience

The target audience is broken down into two groups, Potential employers from developement firms and clients for freelance jobs. The web developement firms targeted delve in the core languages of HTML5, CSS3, Javascript, PHP5, JQuery, and MySQL. As for freelancing jobs, the more diverse your skill-set, the greater chance you will get those jobs since none are exactly the same.

Personal Brand Statement

Many people face many different business problems on the web, whether it be building a web presence or redesigning your existing one. When you need someone who knows how to handle your web problems, QWeb is the one you need by your side. From design and front-end coding to back-end and SEO, QWeb handles it all.

Defining Qualities

- Passionate toward all coding, especially PHP and JavaScript.
- Excel more in development than design.
- Enjoy the piecing of parts together to make a website.
- Experience in a wide variety of fields of design and development. Additional experience in photography, image manipulation, marketing, and advertising.

PC|Builders

## Non-Interactive Piece

PCBuilders

<u>Logo</u>

Software Used:
Adobe Illustrator

<u>Description</u>

You would be surprised how far a touch of orange goes with blue. Utilizing white space on both the left and right of the screwdriver in two completely different ways made it more interesting to look at.

Q Web

Quintin Jackson | Web Developer | qweb.com

PC Gamers' List

Non-Interactive Piece

PCGamersList

Logo

Software Used:
Adobe Illustrator

Description

Keeping the logo in black and white better emphasizes the small negative spaces in-between the pieces. Since this computer reminds me of the older desktop models, I put green in the power button as if the computer was on. The "half" CD is another reference to PC gaming, but combined with the tower to make it more artistically appealing.

Q Web

Quintin Jackson | Web Developer | qweb.com

Non-Interactive Piece
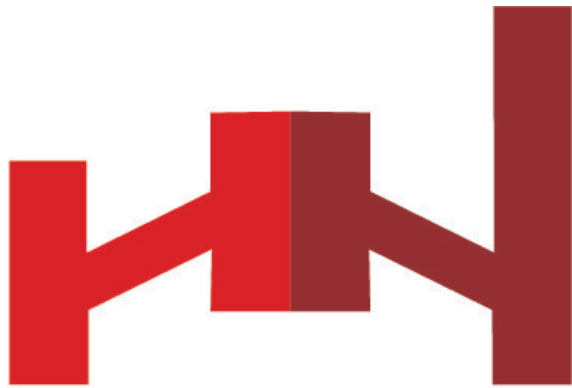

VidItYourself

Logo

Software Used:
Adobe Illustrator

Description

Even though the purpose of the website is more modern, I felt compelled to use an older concept. The circular movie camera lense projecting to the bottom-right gave the logo a nice simplicity compared to designs from the modern sources of video like TV and the internet.

Quintin Jackson | Web Developer | qweb.com

Hail House
House of the Odd and Extrordinary

Non-Interactive Piece

Hail House

Logo

Software Used:
Adobe Illustrator

Description

This one in particular encouraged me to experiment with the typography of the abbreviation. Turning the abbreviation into a house takes some imaginative thinking, but still works without going over people's heads.
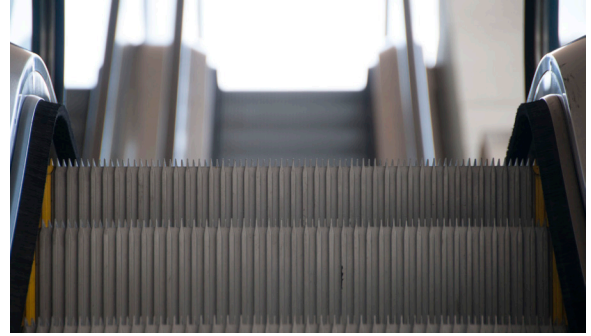

All American
RESTAURANT

Non-Interactive Piece

All American Restaraunt

Description

Even though this is a logo for a website, I imagined a logo that you could put on a restaurant menu and a sign on top of the restaurant as well. Having the stars be blue was tested before, but wasn't an effective accent color. Even without the blue, the typography and curved banner with stars gives the logo a patriotic American feel.

Non-Interactive Piece

Photography

Architecture Photos

Software Used:
Adobe Photoshop

Description

These pictures were taken around the shopping district of Park Lane. The objects that frame the architecture are what make this set interesting to look at. Depth of field further helped with accentuating the surrounding architecture.

Q Web

Quintin Jackson | Web Developer | qweb.com

Non-Interactive Piece
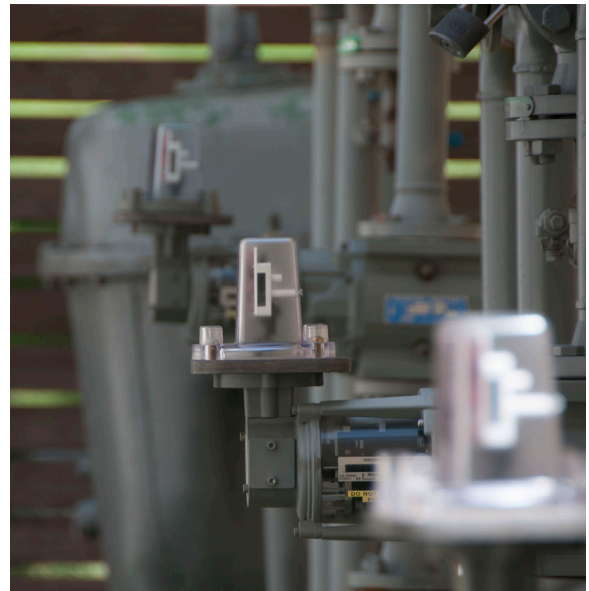

Photography

Suburban Photos

Software Used:
Adobe Photoshop

Description

Photos shot in the city of Carrollton, Texas based around the scenery of the suburban town. There was a difficult time taking picures of interesting subjects located in these areas. Many of these shots required multiple takes and positioning of the subject and elements.

Quintin Jackson | Web Developer | qweb.com

Non-Interactive Piece

Photography

Urban Photos

Software Used:
Adobe Photoshop

Description

Introducing a montage of photos centered around objects and environments located in the city of Dallas, Texas. Using alignment and a large depth-of-field is what helped inspired this set.

Q Web

Quintin Jackson | Web Developer | qweb.com

Non-Interactive Piece

All American Restaurant

Restaurant Poster

Software Used:
Adobe InDesign

Description

Marketing via posters is a great way to expand on typography and layout. What was very interest was implementing an american, patriotic theme to a restaurant without the feeling of government propaganda.

Non-Interactive Piece

## All American Restaurant

Restaurant Menu

Software Used:
Adobe InDesign

Description

This project was a very unique way to test designing ability outside of web. It was interesting to experiment with layout, typography, and color. Since the logo already has racecar red in it, white and blue was needed to balance the color scheme.

Compressor - Blocking Mesh
Quintin Jackson

Non-Interactive Piece

Compressor Model

3D Model
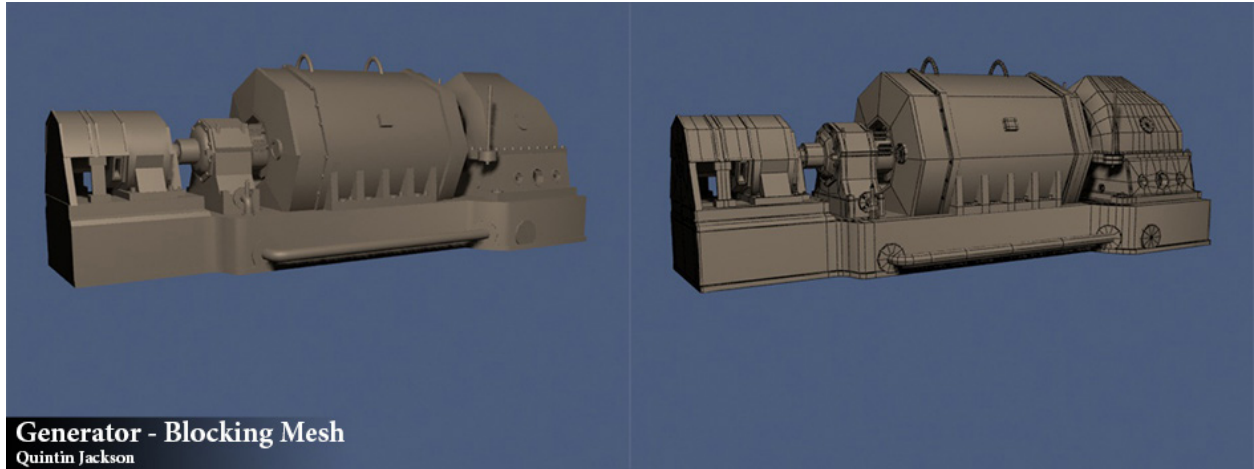

Software Used:
Autodesk 3DS Max

Description

Luckly, most of the pieces of the object are solid and didn't require many polygons. As I worked my way up, the pieces with many holes like the motor and back-plate was much harder to construct efficiently. The motor was especially awkward due to its fusion of cylinder and rectangle shapes.

Quintin Jackson | Web Developer | qweb.com

Generator - Blocking Mesh
Quintin Jackson

Non-Interactive Piece

Generator Model

3D Model

Software Used:
Autodesk 3DS Max

Description

Much of this object consists of is cylinders atop of a rectangle base. The archway towards the back was particularly difficult because it has its own rectangular bases with holes and the arch narrows towards the apex. Smaller pieces proved even more difficult to keep the polygon count low when making the budgetted low-poly model.

PC Gamers List

Website

Software Used:
HTML 5
CSS 3
PHP 5
MySQL

Description

Being a gamer myself, I wanted to create a website about computer games that would be helpful to the users. Building a computer game database can by myself would be time-consuming. Creating a user-generated table would not only solve that problem, but make the site more interactive and interesting. Unlike other websites like this one, user login isn't required to do any of these things. At the very least their would have to be a moderator to confirm the entries and delete inappropriate ones.

Description

Even though computer technology has become common nowadays, there are still many people who that don't know how to build there own computer. To make this website stand out, I included various images, detailed instructions and tips on what parts to put into their computer. Different people need different computers, so it is important to inform the users of what parts they would need and how to install them. I also put in a comments section as a way for users to communicate and help one another. A moderator would be needed to facilitate the comments.

Why Build My Own PC?

Since we have so many things going on in our lives we tend to take shortcuts when we don't have the time to deal with something. Over the years personal computers have become more and more important part in our daily lives. This makes us constantly rethink what we use computers for as they change every year.

As newer technologies become available to the public, the computers themselves change as well. This is why learning how to update and modify your computer to what you need as time moves on is very important. Even your job may require you to use a computer with higher-end or special components that aren't normally sold in the standard market.

Learning how to build your own computer gives you the freedom to build whatever kind of computer you want with any compatible parts. You can also freely upgrade and attach new components that you need later. Whole computers that you buy don't allow you to modify or even open them without voiding a warranty.

Gaming

For the past decade or so, gaming on the PC has skyrocketed to new heights. Computers designed and built for gaming are one of the most common type of computers in the market. Even though gaming consoles have a very strong presense in the gaming market, gaming pc's are still running strong in todays market. The major reason why is because there are many retail and custom pc's that over-power current consoles. Some of these behemoth gaming computers can put current consoles to shame.

Arguably this most important unique components of this type of computer is the graphics card, or GPU. For most other computers you do not need a graphics card. But for gaming in particular, a graphics card is needed to utilize all of todays latest graphic technology. You could just as easily buy a prebuilt computer to play games, but technology changes and advances every year and eventually you'll need to upgrade your computer to play new games that come out.

Games that are multiplatform, or released on most gaming consoles and computers, tend to be of better quality on a computer than consoles. This is because game developers can accomplish much more using the latest in computer technology compared to the limitations that consoles have. Although most users traditionally use a keyboard and mouse to play computer games, gamepads, touchscreens, and motion controllers can also be used if the game is programmed to use it.

Since all computers are not sold by a particular group, games, software, and services are sold more cheaply than consoles because of the competition between the manufacturers and companies. PC games decades old can be played on current systems using emulation software if need be. The openness that the PC allows players to edit some of their games and distribute the results over the Internet as modifications, or "mods". A healthy mod community greatly increase a game's life span and the most popular mods have driven purchases of their parent game to record heights.

Internet/E-mail

The internet itself has gone through such staggering changes in the past ten years that it has been thoroughly integrated into many aspects of our life. Luckily, you don't have to buy many expensive computer parts to make your surfing experience the best it can be. The only components in your computer that govern your internet connection capabilities are the motherboard, CPU, RAM, Hard Drive speed, and NIC (Network Interface Controller) if you have one. There are also other elements outside your computer you must consider when trying to get better internet, like the ethernet cable, router, and internet provider.

This type of computer is normally used to just connect and communicate with other users around the world. If you optimize your computer and internet connection, you might still run into issues connecting with people. Not everyone takes the time to optimize these things so you might have problems connecting with them. That being said, making sure you have the optimal internet speed prevents you from having connection problems with users overall.

The Ethernet capabilities of a computer are either integrated into the motherboard chipset or implemented via a low-cost dedicated Ethernet chip, connected through the PCI or PCI Express bus. A separate network card is not required unless you need additional interfaces or you are making some other type of computer network.

Multimedia

Other very popular uses for a computer are creating graphics, animation, interactive elements, video and audio. Nowadays there are many programs that help you immensely in creating one or nearly all of these things. Depending on what programs you want to use and what you want to create, your computer may need certain components to be higher-end in order to run properly.

Since most of the multimedia uses for a computer are graphical, you will need a good graphics card to render those graphics you will make properly. A higher-end CPU and RAM will also be needed to allow your computer to handle more graphics and animation you may need to add. A large hard drive will allow you to save huge graphic and animation files that you will make. Animation and 3D graphics will need these thing especially in order to run smoothly.

2D graphics and audio are less performance intensive for the most part but you should still consider getting a good CPU, RAM, graphics card, and sound card (for audio) with a large hard drive. If you want more focus on audio, focus on getting a good audio card and sound system to do audio testing.

Word Processing

Word processing is very important for writers, accountants, students, and journalism. With word processing applications you can also create legal copies, memos, reference documents, resumes, greeting cards, letters and letterhead among other important documents. Luckily, running these applications doesn't require extraordinary components in order to run them.

No components are specifically needed for this type of computer. The only things that are necessary are a decent CPU, a couple of gigabytes of RAM, and a good-sized hard drive. A fancy graphics card, NIC, or audio card is unnecessary since you are only dealing with words most of the time.

Components

Motherboard

A motherboard (also known as the mainboard, system board, planar board or logic board) is the main printed circuit board found in computers.

CPU/Processor

A CPU (Central Processing Unit) is the two to three inch chip within a computer that carries out the instructions of a computer program by performing the basic arithmetical, logical, and input/output operations of the system.
